

José Fabián Sifuentes Gálvez

Fullstack Developer | Python & JavaScript | Mechatronics Engineer

jf19sifuentesg@gmail.com · +51 953 186 335 · Lima, Peru · github.com/noonejf · noonejf.github.io

Professional Profile

Fullstack Developer with 3 years of experience designing and building end-to-end web applications. Specialized in React, Node.js, NestJS, and Django, with strong command of SQL databases and AWS deployment. Background in Mechatronics Engineering (PUCP) that brings a systems-level perspective, technical precision, and the ability to solve complex problems in high-performance teams — including real-time software, computer vision, and desktop interfaces.

Experience

Fullstack Developer · Freelance / Commercial Project 2022 – Present

- Developed and implemented a project management web application: staff management, workflows, and organizational resource allocation.
- Core stack: React (frontend), Node.js + NestJS (backend), Django (APIs), SQL Server, PostgreSQL, MySQL, and MariaDB.
- AWS infrastructure: EC2 instances for servers and Lambda functions for serverless processes.
- Professional Git repository management: feature branches, pull requests, and code reviews.
- Database performance optimization and continuous improvement of the responsive UI.

Developer — Embedded Systems & Interfaces · Bear Tech Jan – Jun 2025

- Built the complete software for a pipeline-inspection robot: TCP/IP teleoperation, low-latency multi-camera streaming, and YOLOv8 fault detection, integrated into a PyQt5 interface.
- Python data acquisition and processing pipelines on Raspberry Pi 5.

Professional Intern · INRAS – PUCP · pre-professional until 2025 Jul 2024 – Present

- Designed and developed the graphical interface for the ground station of the INTISAT satellite mission.
- Real-time telemetry software and 3D simulations for space tethers.

Featured Projects

Robotic Teleoperation with Haptic Feedback (V-HAND) · code at github.com/noonejf 2025

- PyQt5 interface with low-latency video streaming (OpenCV), socket-based remote camera server, and virtual robotic hand control in CoppeliaSim with master-slave communication.

LINKU — Space Stereophotogrammetry Software · Speaker at UNI Space TechWeek 2025 – Present

- 3D reconstruction algorithms with stereo vision on Raspberry Pi and AI-based neural sensor fusion.

AI Trading Analysis System · personal research project 2025 – Present

- Python market-data pipeline with machine learning models for trading signals.

INTISAT / AYNISAT — Satellite Mission Software · INRAS 2024 – Present

- Ground station, real-time telemetry, and local payload data processing applications.

Technical Skills

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3

Backend: Node.js, NestJS, Django, Python, REST APIs

Databases: SQL Server, PostgreSQL, MySQL, MariaDB, Firebase

Cloud & DevOps: AWS (EC2, Lambda), Firebase, Git (branching, PRs, code reviews), Linux/Windows

Principles: SOLID, Clean Code, modular architecture

Scientific Python: ML/data, YOLOv8, OpenCV, computer vision, PyQt5

Other Languages: C, C++, MATLAB

Education, Languages & Certifications

Mechatronics Engineering · Pontificia Universidad Católica del Perú (PUCP) 2020 – 2025 · Lima, Peru

Languages: Spanish (native) · English — TOEFL (ICPNA)

Certifications: PERUMEC 2025 — robotics competitor · UNI Space TechWeek — speaker (LINKU project)
